

THE GENE KEYS AND THE COSMOS

An astrological chart captures a particular moment in time and space - a picture of a fusion of Rays, Light, Energy and Consciousness. This moment in time being unique, reflects a potential, a seed waiting to come to fruition. Patterns of planetary energy are being constantly formed and dissolved – a never ending dance in which we all participate.

Physically we are the out picturing of these Rays, Light, Energy and Consciousness, as each of us is enfolded within a Divine Intelligence of Particle and Light underpinning our electro-magnetic cellular system.

Just like the birth chart for an individual, the start of any project or combined initiative, carries the seed potential for what is contained within the fully manifested Divine Design.

In recent years our connection to the Cosmos and to our genetic blueprint has been revealed – for depending upon where the planets are located at any particular time, they will be activating a particular Gene Key.

There are 64 Gene Keys, each embodying a particular archetypal energy and resonance. The 64 Gene Keys are the letters of the Language of Light/Life, a language which is present in the DNA and known to humanity through the I Ching. The same truths intuitively grasped by the ancient sages can now be proven by modern genetics – that the Universe is built upon natural codes and these codes can be deciphered and unlocked.

The Gene Keys connect us to the unchanging truth of 64 Archetypal and Universal attributes of Consciousness. Each Gene Key representing a Code of Life, which is present in each of the trillions of cells in our body, is a portal into our inner Being.

Founded upon the latest discoveries in the science of Cellular Biology, the central premises of the Gene Keys are that every human being has the capacity for spontaneous evolution and that every human being carries an innate higher purpose in life hidden within their DNA.
